

MJ VINZ CARLOS VILLARAIZ

FULL STACK DEVELOPER

Davao City 8000, Philippines | emjeywan@gmail.com | +63 927 8203558

PROFILE

Dedicated and innovative BSIT graduate and Full-Stack Developer with hands-on internship experience in building enterprise-grade web modules, 3D interactive interfaces, and AI-integrated utilities. Seeking to leverage strong skills in React, Next.js, and Laravel to build clean, high-performance, and user-centric digital products. Passionate about continuous learning and highly willing to adapt to and learn new technologies to support evolving industry demands.

ACCOMPLISHMENTS

- TOPCIT 2024 IT Competency Assessment:** Took part in a national IT competency assessment designed to evaluate practical knowledge and technical skills in software development and IT engineering.
- CodeChum Programming Challenge (2024):** Participated in a competitive programming challenge focused on algorithmic problem-solving, logical thinking, and coding proficiency under time constraints.
- MCITS | PSITE Programming Contest (2023, 2024):** Selected as a participant in the annual programming contest, strengthening foundational programming and collaborative problem-solving skills.

PROFESSIONAL EXPERIENCE

Full Stack Developer Intern, Infinity Hub Digital Marketing**Feb 2026 to May 2026**

Developed and enhanced enterprise web application modules, specifically the Pre-Employment Medical Examination (PEME) Records module for the ManPro HR Management System. Built secure backend integrations using PHP and Laravel to efficiently manage and process sensitive medical records, while redesigning and implementing dynamic user interfaces using React and Material-UI (MUI) to improve usability and overall user experience. Also created automated workflows for records management to streamline internal HR operations.

EDUCATION

Holy Cross of Davao College, Davao City, Philippines**2022 to 2026**

Bachelor of Science in Information Technology (BSIT)

TECHNICAL SKILLS

Languages:	TypeScript, JavaScript, Python, C#, Java, PHP, Kotlin
Frontend & Web:	React, Next.js, Tailwind CSS, MUI (Material-UI), GSAP (GreenSock), Three.js
Backend:	Node.js, Laravel, Livewire, Supabase
Mobile Development:	React Native, Expo, NativeWind
Game Dev:	Phaser, Unity, Godot
3D & Graphics:	Blender, WebGL
Tools & Platforms:	Git, GitHub, GitHub Desktop, Firebase, Vercel
AI Developer Tools:	ChatGPT, Gemini, Claude, Cursor, Antigravity, Hugging Face

PROJECTS

OutcomeX (Capstone Project)

An NLP-powered desktop application that analyzes and maps alignment between BSIT course outlines and industry technical competency requirements using Python, PyTorch, and HuggingFace Transformers, with data processing and visualization powered by Pandas and Matplotlib.

Tomato Classifier

Machine learning desktop application that performs real-time tomato ripeness classification from images using C# and .NET Framework with ONNX Runtime for model inference.

EmmLab

High-performance UI laboratory and documentation system built with Next.js and TypeScript, designed for real-time previewing, synthesis, and distribution of advanced React-based components.

Hue Kai

Color management tool for generating, analyzing, and exporting harmonic color palettes using React, TypeScript, and Tailwind CSS, with export features powered by jsPDF.

SRT GEN EM

AI-powered utility for automatic video transcription and subtitle (.srt) generation using React, Vite, TypeScript, Google Gemini AI, and JSZip.

SVG Printer

Natural language-driven SVG generator that produces custom vector graphics using React, TypeScript, Vite, and Google Gemini API.

Tekton

AI-assisted UI generation tool that converts natural language prompts into high-fidelity interface concepts using React, TypeScript, and Google Gemini.

Kanji Terminal

Terminal-inspired Japanese learning application for Kanji practice and exam simulation built with React, TypeScript, and Framer Motion.

KanaBlitz

Fast-paced Japanese kana learning platform for Hiragana and Katakana practice using React, TypeScript, and Tailwind CSS.

Github Stats

Dynamic GitHub profile stats generator that creates customizable SVG cards using Next.js and TypeScript.

Anime Series Directory

Real-time anime browsing and watchlist platform built with React, Firebase, and TypeScript, integrated with AniList and Jikan APIs.

Interdimensional Codex

Web-based encyclopedia exploring the Rick and Morty universe, built with React, TypeScript, and Vite.

Gigavry

Gaming discovery platform aggregating free-to-play games and giveaways using React, TypeScript, and external gaming APIs (FreeToGame, GamerPower).

Dota Terminal

Terminal-style Dota 2 stats viewer built with React, TypeScript, and Vite.

Ror2 Save Editor

Web-based save editor for Risk of Rain 2 using React, TypeScript, and Tailwind CSS, supporting DLC unlocks and loadout editing.

TIC TAC TOE

Real-time multiplayer Tic-Tac-Toe game using React, Node.js, and Socket.io for WebSocket-based gameplay.

Blood Echoes

Roguelite dungeon crawler web game built with React, TypeScript, and Vite, featuring procedural progression mechanics.

Neon Survivor

Experimental survival web game built with React, Vite, and Tailwind CSS.

Dodge Master

2D arcade survival game developed in Java using AWT and Swing, featuring wave-based enemy patterns.

CERTIFICATIONS

- ReactJS For Beginners – Simplilearn (2026)
- Basics of Web Scraping – Simplilearn (2026)
- Product Development & Management – Udemy (2026)
- Python Complete Course – Udemy (2026)
- Deepseek AI: Automate Tasks and Write Code Effortlessly – Udemy (2026)
- The Complete JavaScript Course: From Zero to Expert – Udemy (2026)

COMPETITION & PARTICIPATION

- Participant – TOPCIT (2024)
- Participant – CodeChum Programming Challenge (2024)
- Participant – MCITS Programming Contest | PSITE (2024)
- Participant – MCITS Programming Contest | PSITE (2023)
